

Surface Area of Prisms

8.2 Part 1

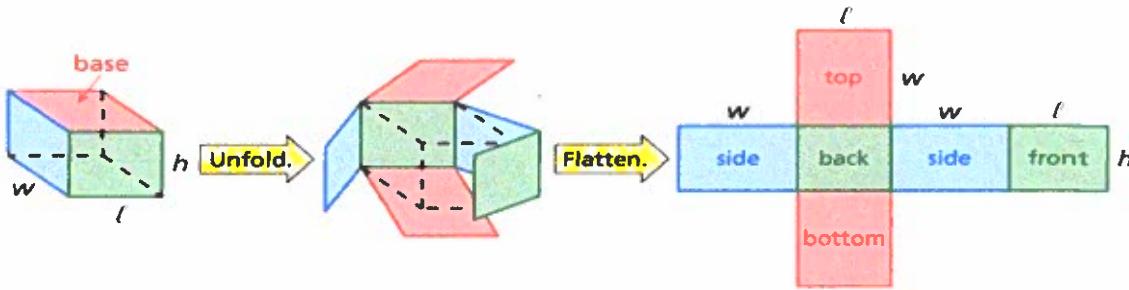

Essential Question: How can you find the area of the entire surface of a prism?

The surface area of a solid is the sum of the areas of all of its faces.

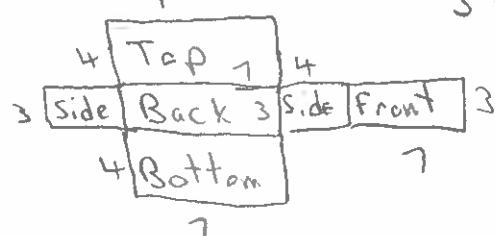

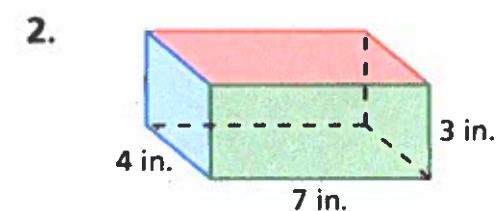

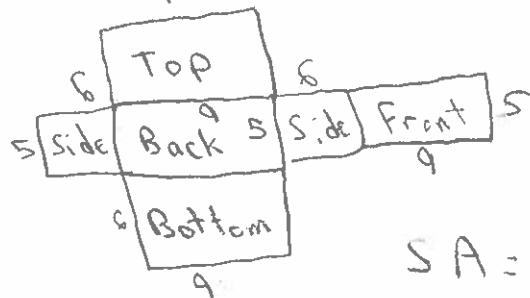

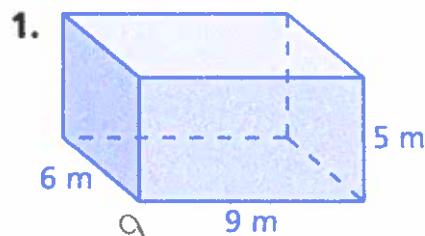

You can use a two-dimensional representation of a solid called a net to find the surface area of a solid. Surface area is measured in square units.

Net of a Rectangular Prism

A rectangular prism is a prism with rectangular bases.

Find the surface area of the Rectangular Prism.
